

Applications

- Engines
- CNC Machinery
- Stamping Presses
- Roll Mills
- Motors
- Pumps
- Paper Machine Presses
- Cable Machinery
- Air Compressors
- Generators
- Gearboxes

elasto-Machine-Mounts isolate shock, motion and vibration of heavy production machinery. The horizontal stiffness is larger than the vertical stiffness. The recommended use of elasto-Machine-Mounts is when the requirements are to avoid horizontal movements.

CHARACTERISTICS AND CAPABILITIES OF ELASTO-MACHINE-MOUNTS

-Motion Isolation: Production efficiency is only possible with preventable downtime. elasto-Machine-Mounts will protect sensitive electric motor or aggregates from incurred movements.

-Vibration Absorption: Most machinery transfers vibrations to the immediate environment. With the installation of our elasto-Machine-Mounts the vibration transfer will be prevented.

-Noise Reduction: All Machinery not isolated produce motion and noise. An effective isolation will be evident with the installation of our elasto-Machine-Mounts

ELASTO-MACHINE-MOUNTS (ADVANCED DESIGN)

The unique design of the elasto-Machine-Mounts is that the horizontal stiffness is greater than the vertical stiffness, which is necessary for effective isolation issues.

-Fail-Safe Design: This important feature is advantageous in some applications with tension force

-Low overall heights:

-High Load Capacity: Different sizes for most applications. Mounts available are effective up to a 2,400 kg (5,300 LBS) load.

-Height Adjustment: This unique feature of leveling prevents vibration transfer to costly machinery, static platforms or factory floors.

-Maintenance Free and Long Term Durability:

-The advanced design prevents oil and grease accumulation on the rubber surface. This allows for the use of durable natural rubber.
