

Applications

- Shipping Containers
- Silos
- Wind Power Plates
- Heavy Machinery
- Heavy Trucks
- Busses

elasto-Flex-Mounts are used on silos, shipping containers, wind power plates or other large equipment to protect them during transportation from shock and vibration. The rubber will absorb the movements and the impact to avoid damage. The elasto-Flex-Mounts can also be found in other transportation vehicles or just as noise or vibration control on heavy machinery to protect the surrounding equipments.

CHARACTERISTICS AND CAPABILITIES OF ELASTO-FLEX-MOUNTS.

-Motion Isolation: Production efficiency is only possible with preventable downtime. elasto-Flex-Mounts will protect sensitive electric motors from motion.

-Vibration Absorption: Most machinery transfers vibrations to the immediate environment. With the installation of our elasto-Flex-Mounts the vibration transfer will be prevented.

-Noise Reduction: All Machinery not isolated produce motion and noise. An effective isolation will be evident with the installation of our elasto-Flex-Mounts

ELASTO-FLEX-MOUNTS (ADVANCED DESIGN)

The design of the elasto-Flex-Mounts are developed to absorb forces in shear and in compression. The rubber is bonded on two metal plates which can be mounted on each side onto the floor, frame or equipments.

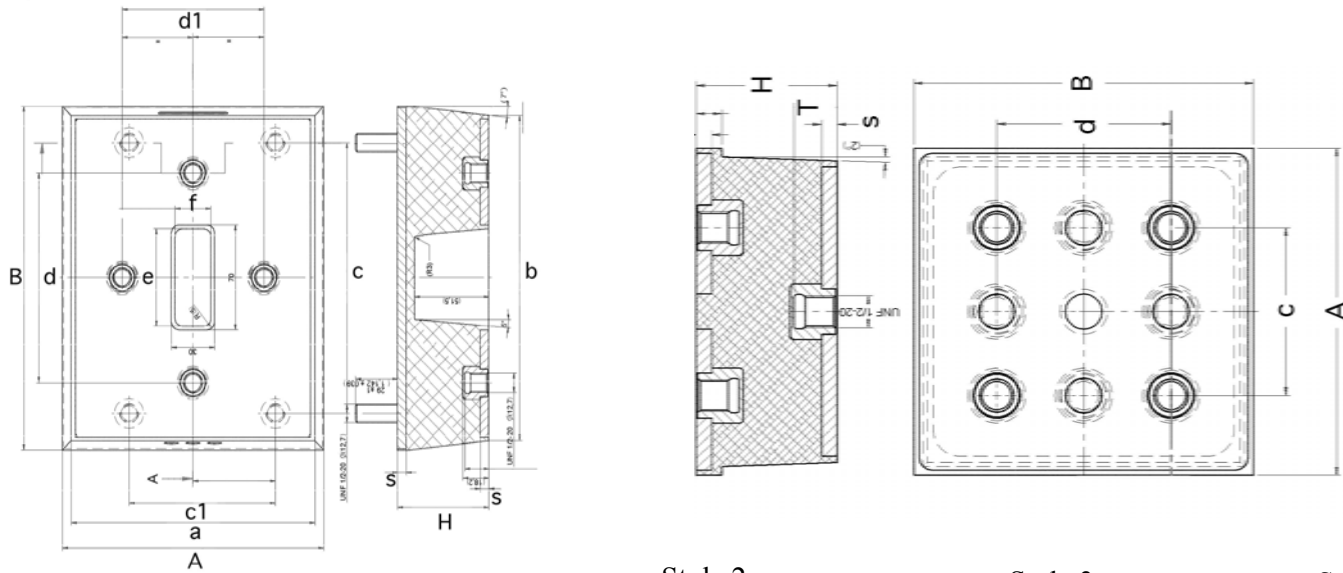

-Load Capacity: Different sizes for most applications. Mounts available are effective up to a 10 kN (20,500 LBS) load.

-Maintenance Free and Long Term Durability: The standard rubber compound is developed for rough environmental conditions.

-elastometal provides over 800 different rubber compounds for all industry applications.
